MODAMINDfuels

ABOUT MODACARE

Modacare 200 mg contains modafinil, a prescription wakefulness–promoting medicine. It is used for certain conditions involving excessive daytime sleepiness, including narcolepsy, obstructive sleep apnea, and shift work sleep disorder, under appropriate medical supervision and individualized treatment guidance for patients, with ongoing medical monitoring and review.

MODAMINDfuels

KEY INFORMATION

01

Modacare 200 mg contains modafinil and is formulated as a tablet. Its use should follow a healthcare professional's assessment, prescribed dose, and guidance based on patient needs and treatment goals.

02

Modafinil promotes wakefulness and may help reduce excessive daytime sleepiness associated with certain diagnosed conditions. It does not replace adequate sleep, medical evaluation, or treatment when those interventions are required.

03

Because modafinil can interact with other medicines and cause adverse effects, patients should disclose prescriptions, supplements, allergies, and medical history to their healthcare professional before beginning treatment or changing therapy.

MODAMINDfuels

BENEFITS

01

May support wakefulness by reducing excessive daytime sleepiness associated with diagnosed conditions when used under medical supervision and according to prescribed directions from a healthcare professional.

02

May help eligible patients maintain daytime alertness when excessive sleepiness interferes with normal routines, work responsibilities, or activities, following professional medical evaluation treatment recommendations.

03

For shift workers, prescribed modafinil may help manage sleepiness during scheduled working hours, while healthy sleep habits and appropriate scheduling remain important parts of care.

MODAMINDfuels

USAGE

Modacare 200 mg is a modafinil–based prescription medicine intended for specific wakefulness–related conditions. Its benefits and suitability depend on diagnosis, medical history, other medicines, and professional guidance from a qualified healthcare professional, and monitoring needs.

01

Prescription use should follow medical advice and the directions provided by a qualified healthcare professional

02

Tell your clinician about medicines, supplements, allergies, pregnancy, breastfeeding, and relevant health conditions before use.

03

Seek prompt medical attention for severe rash, blistering, swelling, breathing difficulty, chest symptoms, or reactions.

MODAMINDfuels

SAFE USE GUIDELINES

Safe use begins with medical guidance. Take Modacare 200 mg only as prescribed, avoid changing the dose independently, and discuss interactions with your healthcare professional. Store tablets in a cool, dry place away from sunlight and children. Report unusual or serious reactions promptly to your healthcare provider at all times.

MODAMINDfuels

IMPORTANT PRECAUTIONS

Modafinil may cause side effects and interact with other medicines. Medical supervision is important, particularly when starting treatment, changing therapy, or managing other health conditions. Patients should follow prescribed instructions and promptly report concerning symptoms to their healthcare professional for appropriate assessment, monitoring, and advice.

MODAMINDfuels

SIDE EFFECTS

Possible adverse effects can include headache, nausea, nervousness, dizziness, insomnia, or other reactions. Individual responses vary, so patients should discuss persistent or troublesome symptoms with their healthcare professional for appropriate evaluation and guidance when appropriate.

Rare but serious reactions can occur, including severe skin reactions or significant allergic symptoms. Stop and seek urgent medical attention if serious symptoms such as blistering, swelling, or breathing problems develop, without delaying professional evaluation.

MODAMINDfuels

MEDICAL GUIDANCE

Modacare 200 mg should be used as part of a medically supervised treatment plan. It is not a substitute for sufficient sleep or professional diagnosis. Discuss expected benefits, risks, interactions, and dosing with your healthcare professional, and use the medicine only according to prescribed directions and treatment recommendations when appropriate.
